Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

This is in response to the Final Office Action mailed June 1, 2009. A Notice of Appeal accompanies this submission. Applicants respectfully request review prior to the filing of an Appeal Brief, based upon the following.

REMARKS

In the Final Office Action, the Examiner has rejected all of the currently pending claims. More specifically, the Examiner has rejected various combinations of the currently pending claims under 35 U.S.C. § 103(a) as being unpatentable over combinations of Lakkakorpi (U.S. Patent No. 7,489,632) in view of Daoud et al. (U.S. Publication No. 2002/0087694), Ejzak (U.S. Publication No. 2003/0027595), Kundu (U.S. Publication No. 2004/0117794), and/or Swildens et al. (U.S. Patent No. 7,346,676). Applicants respectfully submit that the Examiner's rejections of the claims are clearly erroneous, and therefore, must be withdrawn.

Applicants respectfully submit that the Examiner's rejections fail to establish a prima facie case of obviousness because the cited documents, taken singly or in any combination, fail to teach or suggest at least the following claim language:

A method of communicating load, comprising:

determining a load on a first node;

factoring the load into a session initiation protocol (SIP) Q-value for the first node, where the Q-value is an integer value based on both (1) a contact priority and (2) a number of calls or an amount of information being processed for a call;

transmitting the Q-value to a second node via one or more load brokers where each load broker is a back-to-back user agent; and

determining a domain load factor for a domain that comprises a plurality of SIP entities, the domain load factor indicating domain load for the entire domain, the domain load factor to be shared with other domains and to be used with the Q-value to determine call routing. (Claim 1).

These limitations of claim 1 are found in substantially similar or identical form in the other independent claims. Therefore, all of the currently pending claims must be construed as incorporating the above or substantially similar claim language.

At pages 2-3 of the Final Office Action and in the Continuation Sheet of the Advisory Action (dated August 7, 2009), the Examiner argues that Lakkakorpi discloses using a “Q-value.” However, as is well known to those of ordinary skill in the art, a “SIP Q-value” (see claim 1 above) is a specific Session Initiation Protocol (SIP) parameter that has specific properties/uses according to SIP. See, e.g., pages 35 and 46 (§§8.1.3 and 10.2.1, respectively) of RFC 3261 and related SIP standards documents. Nothing in any of the documents relied upon by the Examiner (including Lakkakorpi) discloses or suggests use of such SIP Q-value in any

fashion, much less, in the specific manner argued by the Examiner at pages 2-3 of the Final Office Action, or in specific manner recited in the claims. Indeed, the term “Q-value” is nowhere found anywhere in Lakkakorpi, at all!¹

At page 3 of the Final Office Action, the Examiner acknowledges that Lakkakorpi fails to disclose “session initiation protocol and a plurality of entities, where the Q-value is an integer value based on both (1) a contact priority and (2) a number of calls or an amount of information being processed for a call.” The Examiner argues that Daoud and Ejzak disclose these missing features. Final Office Action, page 3; Continuation Sheet of Advisory Action. However, as stated above, nothing in any of the documents relied upon by the Examiner, including Daoud and Ejzak, discloses or suggests use of a SIP Q-value in any fashion, much less, in the manner set forth in the claims (see claim 1). Additionally, even a cursory review of the specific portions of Daoud and Ejzak that are argued by the Examiner to disclose the above claim features reveals that Daoud and Ejzak cannot be said actually to disclose or suggest such features. See Applicants’ Response After Final Rejection submitted 28 July 2009, pages 7-11. Additionally, nothing in Kundu and/or Swildens et al. can be said to disclose or suggest the above underlined features of the claims that are wholly missing from Lakkakorpi, Daoud, and Ejzak.

These differences between these documents relied upon in the Examiner’s rejections (on the one hand), and the claims (on the other hand), are not merely academic. For example, although the limitations in the claims are not limited to or bound by embodiments disclosed in the Specification, in an embodiment disclosed in the Specification, these features of the claimed invention that are not disclosed or suggested in these documents permit this embodiment to

¹ Furthermore, no combination of the documents relied upon by the Examiner with RFC 3261 would disclose or suggest specific features of the claims.

operate in a manner that is different from, and to achieve advantages compared to the technology disclosed in these documents. (See, e.g., Specification, page 10, lines 14-22).

Accordingly, since these advantageous features of the claimed invention are nowhere disclosed or suggested in any of the documents relied upon by the Examiner, it is respectfully submitted that none of these documents, taken singly or in any combination, anticipates or renders obvious the claimed invention. Therefore, it is respectfully submitted that the Examiner's rejections of the claims under 35 USC § 103 cannot be maintained, and should be withdrawn.

In the event that any fees are due or payable in connection with this submission or in this application (including any applicable appeal-related or extension of time for response fees) please charge them to Deposit Account No. 50-4238. Likewise, please credit any overcharges to Deposit Account No. 50-4238.

Respectfully submitted,
